

A5  
Cont'd

- (c) a communication path electronically linking the user interface to the server.

14. (Amended) An automated system for generating a credit report for a lessee of a piece of leased equipment, the system comprising:

- (a) a user interface;
- (b) a server adapted to electronically receive identification information from the user interface, store the information, process the information, and generate the credit reports; and
- (c) a communication path electronically linking the user interface to the server.

A6

17. (Amended) An automated system for generating a quote for a piece of leased equipment and generating a credit report for a lessee of the piece of leased equipment, the system comprising:

- (a) a user interface;
- (b) a server adapted to electronically receive identification information from the user interface, store the information, process the information, and generate the quote; and
- (c) a communication path electronically linking the user interface to the server.

A7

### REMARKS

#### Objections to the Specification

The Examiner objected to the specification noting that certain Figures were not described. By the above amendments, these Figures have been described within the specification and the objection is obviated. The Examiner also noted that an "Appendix A" was referenced but not provided. As such, this reference has been removed.
